BISOPROLOL TABLETS – RELATED SUBSTANCES

It has come to our attention that the British Pharmacopoeia monograph for Bisoprolol Tablets contains limits in the Related substances test which are too restrictive with respect to impurities K, L and M. A draft revised monograph will be available for public consultation in July 2018 in order to set appropriate limits. The revised monograph will be published in a future edition of the British Pharmacopoeia – the current target publication is the BP 2020.

If you have any questions concerning this letter please do not hesitate to contact the British Pharmacopoeia Secretariat.

Yours faithfully,

Mr James Pound

Group manager - British Pharmacopoeia & Lab Services
