Bisoprolol Tablets

**Bisoprolol Preparations**

**Action and use**

Beta-adrenoceptor antagonist.

**DEFINITION**

Bisoprolol Tablets contain Bisoprolol Fumarate. The tablets comply with the requirements stated under Tablets and with the following requirements.

**Content of bisoprolol fumarate, \((C_{18}H_{27}NO_{5})_2\cdot C_{4}H_{8}O_{4}\)**

92.0 to 105.0% of the stated amount.

**IDENTIFICATION**

A. Carry out the method for thin-layer chromatography, Appendix III A, using the following solutions.

1. Dissolve a quantity of the powdered tablets containing 10 mg of Bisoprolol Fumarate in methanol, dilute to 10 mL with the same solvent, mix and filter (a 0.45-µm nylon syringe filter is suitable).
2. 0.1% w/v of bisoprolol fumarate BPCRS in methanol.

**CHROMATOGRAPHIC CONDITIONS**

(a) Use as the coating silica gel F<sub>254</sub>.
(b) Use the mobile phase as described below and allow to saturate for 1 hour.
(c) Apply 25 µL of each solution.
(d) Develop the plate to 15 cm.
(e) After removal of the plate, dry in air and examine under ultraviolet light (254 nm).

**MOBILE PHASE**

20 volumes of methanol and 80 volumes of ethyl acetate. At the bottom of the chromatography tank, place a beaker containing 15 mL of concentrated ammonia.

**CONFIRMATION**

The principal spot in the chromatogram obtained with solution (1) corresponds in position and colour to that in the chromatogram obtained with solution (2).

B. In the Assay, the retention time of the principal peak in the chromatogram obtained with solution (1) is similar to that of the principal peak in the chromatogram obtained with solution (2).

**TESTS**

**Dissolution**

Comply with the requirements in the dissolution test for tablets and capsules, Appendix XII B1.

**TEST CONDITIONS**

(a) Use Apparatus 2, rotating the paddle at 50 revolutions per minute.
(b) Use 900 mL of water, at a temperature of 37°, as the medium.

**PROCEDURE**

Solution A. Prepare a solution containing 2.5 volumes of orthophosphoric acid, 5 volumes of triethylamine, 35 volumes of water and 160 volumes of methanol.

Carry out the method for liquid chromatography, Appendix III D, using the following solutions.

1. After 45 minutes withdraw a sample of the medium, filter and dilute with an equal volume of solution A.
2. Dissolve a quantity of bisoprolol fumarate BPCRS in water to obtain a solution with a concentration of about twice the concentration of bisoprolol fumarate in solution (1). Dilute 1 volume of this solution to 2 volumes with solution A.

**CHROMATOGRAPHIC CONDITIONS**

(a) Use a stainless steel column (3.3 cm × 4.6 mm) packed with octasilyl silica gel for chromatography (3 µm) (Pecosphere 3CR C8 is suitable).
(b) Use isocratic elution and the mobile phase described below.
(c) Use a flow rate of 1 mL per minute.
(d) Use an ambient column temperature.
(e) Use a detection wavelength of 227 nm.
(f) Inject 50 µL of each solution.

**MOBILE PHASE**

2 volumes of triethylamine, 68 volumes of methanol and 100 volumes of water, adjusted to pH 4.0 using orthophosphoric acid.

**DETERMINATION OF CONTENT**

Calculate the total content of bisoprolol fumarate, \((C_{18}H_{27}NO_{5})_2\cdot C_{4}H_{8}O_{4}\), in the medium from the chromatograms obtained and using the declared content of \((C_{18}H_{27}NO_{5})_2\cdot C_{4}H_{8}O_{4}\) in bisoprolol fumarate BPCRS.

**LIMITS**

The amount of bisoprolol fumarate released is not less than 75% (Q) of the stated amount.

**Related substances**

Carry out the method for liquid chromatography, Appendix III D, using the following solutions.
Solution B Prepare a mixture of 2 volumes of acetonitrile and 8 volumes of water for chromatography.

1. Mix with the aid of ultrasound a quantity of the powdered tablets containing 10 mg of Bisoprolol Fumarate in solution B. Add sufficient solution B to produce a 0.1% w/v solution of Bisoprolol Fumarate. Mix and filter (0.45-μm nylon syringe filter is suitable).

2. Dilute 1 volume of solution (1) to 100 volumes with solution B.

3. Dilute 1 volume of solution (2) to 5 volumes with solution B.

4. Dissolve the contents of a vial of bisoprolol for peak identification EPCRS (containing impurities A and E) in 1.0 mL of solution B.

5. Dissolve the contents of a vial of bisoprolol for system suitability EPCRS (containing impurity G) in 1.0 mL of solution B.

6. 0.001% w/v of bisoprolol impurity standard BPCRS (containing K and L) in solution B.

CHROMATOGRAPHIC CONDITIONS
(a) Use a stainless steel column (25 cm × 4.6 mm) packed with monolithic octadecylsilyl silica gel for chromatography (5 μm) (Ace C18 is suitable).
(b) Use gradient elution and the mobile phase described below.
(c) Use a flow rate of 1 mL per minute.
(d) Use a column temperature of 20°C.
(e) Use a detection wavelength of 225 nm.
(f) Inject 10 μL of each solution.

MOBILE PHASE

Mobile phase A 1% w/v solution of orthophosphoric acid.

Mobile phase B 1% w/v solution of orthophosphoric acid in acetonitrile R1.

Use the chromatogram supplied with bisoprolol for peak identification EPCRS and the chromatogram obtained with solution (4) to identify the peaks due to fumaric acid and impurity A; use the chromatogram supplied with bisoprolol for system suitability EPCRS and the chromatogram obtained with solution (5) to identify the peak due to impurity G; use the chromatogram supplied with bisoprolol impurity standard BPCRS and the chromatogram obtained with solution (6) to identify the peaks due to impurities L and K.

When the chromatograms are recorded under the prescribed conditions, the relative retentions with reference to bisoprolol (retention time about 22 minutes) are: impurity A, about 0.48; impurity L, about 0.54; impurity G, about 1.03; impurity K, about 1.04; impurity M, about 1.2 and impurity 1 (split peak), about 1.3.

SYSTEM SUITABILITY
The test is not valid unless, in the chromatogram obtained with solution (5), the peak to valley ratio is at least 2.5, where H_p is the height above the baseline of the peak due to impurity G and H_v is the height above the baseline of the lowest point of the curve separating this peak from the peak due to bisoprolol.

LIMITS
In the chromatogram obtained with solution (1): the area of any peak corresponding to impurity K is not greater than 3 times the area of the principal peak in the chromatogram obtained with solution (2) (3.0%); the area of any peak corresponding to impurity L is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (1.0%); the area of any peak corresponding to impurity M is not greater than 3 times the area of the principal peak in the chromatogram obtained with solution (3) (0.6%); the area of any peak corresponding to impurity L and G is not greater than half the area of the principal peak in the chromatogram obtained with solution (2) (0.5% of each); the area of any peak corresponding to impurity A is not greater than 1.5 times the area of the principal peak in the chromatogram obtained with solution (2) (0.3%); the area of any other secondary peak is not greater than the area of the principal peak in the chromatogram obtained with solution (3) (0.2%);

the sum of the areas of any secondary peaks, excluding the peaks due to impurity K and L, is not greater than twice the area of the principal peak in the chromatogram obtained with solution (3) (0.1%); disregard any peak with an area less than half the area of the principal peak in the chromatogram obtained with solution (2) (3.0%).

Disregard any peak with an area less than half the area of the principal peak in the chromatogram obtained with solution (2) (0.5%); disregard the peaks due to fumaric acid.

Uniformity of content
Tablets containing less than 2 mg and/or less than 2% w/w of Bisoprolol Fumarate comply with the requirement stated under Tablets using the following method of analysis. Carry out the method for liquid chromatography, Appendix III D, using the following solutions in the mobile phase.

1. Add 20 mL of mobile phase to one tablet and mix with the aid of ultrasound. Dilute with sufficient mobile phase to produce a solution containing 0.005% w/v of Bisoprolol Fumarate and filter (0.45-μm nylon syringe filter is suitable).

2. 0.005% w/v of bisoprolol fumarate BPCRS.

CHROMATOGRAPHIC CONDITIONS
The chromatographic conditions described under Assay may be used.

DETERMINATION OF CONTENT
Calculate the content of (C_18H_31NO_4)_2C_4H_4O_4 in each tablet using the declared content of (C_18H_31NO_4)_2C_4H_4O_4 in bisoprolol fumarate BPCRS.
ASSAY

For tablets containing less than 2 mg and/or less than 2% w/w of Bisoprolol Fumarate
Use the average of the individual results determined in the test for Uniformity of content.

For tablets containing 2 mg or more and 2% w/w or more of Bisoprolol Fumarate

Weigh and powder 20 tablets. Carry out the method for liquid chromatography, Appendix III D, using the following solutions in mobile phase.

(1) To a quantity of the powdered tablets containing 25 mg of Bisoprolol Fumarate add 45 mL of the mobile phase and mix with the aid of ultrasound. Dilute with sufficient mobile phase to produce a solution containing 0.005% w/v of Bisoprolol Fumarate and filter (a 0.45-µm nylon syringe filter is suitable).

(2) 0.0005% w/v of bisoprolol fumarate BPCRS.

CHROMATOGRAPHIC CONDITIONS

(a) Use a stainless steel column (25 cm × 4.0 mm) packed with octadecylsilyl silica gel for chromatography (5 µm) (LiChrospher RP - Select B is suitable).

(b) Use isocratic elution and the mobile phase described below.

(c) Use a flow rate of 1 mL per minute.

(d) Use a column temperature of 45°.

(e) Use a detection wavelength of 225 nm.

(f) Inject 20 µL of each solution.

MOBILE PHASE

0.5 volumes of glacial acetic acid and 1000 volumes of 0.136% sodium acetate trihydrate in methanol (50%).

When the chromatograms are recorded under the prescribed conditions, the retention time of bisoprolol is about 5 minutes.

SYSTEM SUITABILITY

The assay is not valid unless, in the chromatogram obtained with solution (2), the symmetry factor of the peak due to bisoprolol is between 0.8 and 1.6.

DETERMINATION OF CONTENT

Calculate the content of (C₁₈H₃₁NO₄)₂.C₄H₄O₄ in the tablets using the declared content of (C₁₈H₃₁NO₄)₂.C₄H₄O₄ in bisoprolol fumarate BPCRS.

IMPURITIES

The impurities limited by the requirements of this monograph include those listed under Bisoprolol Fumarate and:

1. Bisoprolol N-aldehyde
